INTERNAL EVIDENCE REVIEW | 4 NOVEMBER 2026

RetirePilot
Final Pre-Push Gate Report

Review of the eight requested completion steps. Draft PR #10 is unchanged.

FINAL DECISION: HOLD / NO-GO

The source prototype passes its synthetic CI tests. Financial, security, legal and real consumer validation do not satisfy pilot release gates. No further GitHub push or merge was performed.

Evidence snapshot

Baseline	Observed result
GitHub PR #10	Open draft; 71 files, no reviewer approvals, not merged
GitHub Actions	Run 41750449875 succeeded on head 24996da69269
Local engineering checks	609 Python tests; 498 persona contracts; 13 API checks, all passed
Additional targeted probes	17 expected behaviours reproduced, including two security weaknesses
External evidence	0 financial approvals; 0 security approvals; 0 legal opinions; 0/48 real participants

All eight steps: present status

Step	Verdict	Reason
1. Source merge	PENDING	Draft PR requires review and product-owner pre-push decision.
2. CPF/finance	PARTIAL	Age-55 and illustration references only; full CPF and independent numeric sign-off absent.
3. Five scenarios	PARTIAL	Four limited previews; divorce blocked; none integrated into full forecast.
4. Security	FAIL	No user auth, synthetic ID can be spoofed, no production tenant consent control.
5. Financial reviewer	NOT DONE	No independent professional sign-off.
6. Security reviewer	NOT DONE	No independent test or penetration assessment.
7. Legal reviewer	NOT DONE	No Singapore lawyer opinion or pilot legal clearance.
8. Consumer/pilot	NOT DONE	Zero real interviews; hypothetical PASS only for development planning.

1. Financial modelling and priority scenarios

CPF source evidence and implemented scope

CPF Board publishes the 2026 Full Retirement Sum of S$220,400 and the 2027 amount of S$228,200. The bounded implementation conserves account balances on a precise 55th birthday and moves SA then OA into RA. It does not model ongoing contribution allocations, interest-credit timing, extra interest, later RA changes, housing-related refunds, special cohorts or personalised CPF LIFE payouts.

Reference checked	Observed local behaviour
2026 FRS transfer	OA S$140,000 + SA S$120,000 yields RA S$220,400 and OA S$39,600 on birthday.
2027 under-FRS transfer	OA S$50,000 + SA S$45,000 yields RA S$95,000, below FRS.
CPF LIFE illustration	Published S$220,400 reference at 55 maps to example S$1,780 monthly at 65; not a personal quote.
Non-table CPF LIFE	Refuses arbitrary RA amount rather than interpolating an unapproved personal payout.

Five scenario preview boundaries

Scenario	Current result	Blocker
S020 Downsizing	Limited sale/replacement cash arithmetic	CPF crediting, HDB rules, duties, timing
S030 Payout deferral	Compare two member-provided CPF estimates	Lifecycle cash flow / no actuarial engine
S004 Part-time	Net earned cash difference	CPF, tax and employment transitions
S016 Parent care	Extra monthly care spending	Benefits, leave and reimbursements
S012 Divorce	Explicitly blocked	Legal settlement, custody, ownership and adult consent

None of these previews posts to the household forecast. That is correct fail-closed behaviour, not completed scenario support. The broader 46-event catalogue is documented but not production-valid.

Source references

CPF Board FRS, reaching age 55, monthly payout illustrations and 2026 quarter-four interest rates; official URLs are in the Markdown evidence report. These sources were reviewed for current published boundaries.

2. Security, legal and research gates

Security findings

The API currently accepts unauthenticated evaluation requests for synthetic fixtures. The synthetic-record ID restriction is only a prefix check. A fabricated profile carrying a synthetic-looking ID and an additional unrecognised field returned HTTP 200 in the focused probe. This demonstrates missing data-origin proof, not a real customer-data breach.

Local Fernet encryption and a blocked household-sharing method are useful safeguards for a localhost synthetic prototype. They do not replace authenticated identity, independent consent from each adult, tenancy isolation, key management, rate limits, TLS, lifecycle deletion or penetration testing.

Legal and assurance

MAS financial advisory guidance asks whether activity amounts to advice and whether it is carried on as a business. PDPC guidance calls for appropriate personal-data use, notice, consent and safeguards. These are relevant regulatory boundaries, not a substitute for qualified Singapore legal counsel on the exact production features.

External assurance	Current evidence	Next authority
Financial	0 qualified sign-offs	Independent qualified financial/CPF specialist
Security	0 external reviews and 0 penetration tests	Independent cybersecurity reviewer
Legal	0 signed Singapore advice	Singapore-qualified financial regulatory / privacy lawyer
Consumer	0/48 real research sessions	Recruitment partner, actual consenting participants and independent UX research

Consumer planning assumption

Product decision 7A assumed success only for planning. The 48 planned slots have no completed interviews, and the previously simulated workflows do not demonstrate task comprehension, accessibility, trust or decision quality in people aged 45+. The pilot remains blocked.

Four earlier exploratory reviewer/recruitment emails were sent. The connected Gmail search in this review returned no replies from the four contacted organisations. No fee, contract or appointment has been approved.

3. Required closure evidence and approval control

Sequence	Deliverable and objective acceptance evidence
A. Pre-push hold	Product owner reviews this report. PR #10 remains draft. No further GitHub write or merge until explicit release-source approval.
B. Financial engine	Reconciled month-by-month CPF account movements, effective-dated rules, member-provided official CPF LIFE estimate; independent signed golden cases.
C. Scenario engines	Five complete event treatments with preconditions, money flows, reversibility, household posting semantics, unit and SME validation.
D. Security	Deployable authenticated identity and separate adult consent, scoped authorisation, secrets and key handling, threat assessment, penetration test.
E. Professional reviews	Qualified, independent reviewers contracted only after quotes and specific owner approval. Signed dated findings for exact reviewed revision.
F. Consumer research	48 actual consented sessions and independent analysis with critical comprehension and accessibility failures fixed and retested.
G. Pilot decision	Formal accountable GO only when financial, security, legal, research and operational controls are evidenced; otherwise NO-GO.

Evidence reproducibility

GitHub: eddiepiper/RetirePilot; PR #10 head SHA 24996da69269add2bf294fc5e598e8cd4597d9fd; GitHub Actions 41750449875. Local verification: 609 pytest, 498 persona and 13 API checks. Additional 17 case probes: run_extra_checks.py with prepush_probes.json. Original v2.7 archive SHA256: 2746a152f267769f8653aa6fed987d3e6881547e8669d87de9bb0a24182eab98

Sign-off register (no approvals currently recorded)

Approval / evidence	Present state
Product owner: review before another GitHub push	AWAITING
Independent financial reviewer	NOT SIGNED
Independent security reviewer	NOT SIGNED
Singapore-qualified legal reviewer	NOT SIGNED
48 actual research sessions	0/48
Phase 9 controlled pilot	NO-GO

This is an internal code and evidence audit. It is not a financial assurance statement, cybersecurity certification, legal opinion, or proof of real consumer validation.
